

SLENDER WONDER MEDICAL WEIGHT LOSS

Slender Wonder is a medical weight loss programme treating patients who struggle with overweight or obesity. Only Slender Wonder accredited doctors, trained by the organisation, are allowed to prescribe and distribute the programme. At Slender Wonder the cause of obesity and not just the symptoms are treated. By following this approach, the programme has an excellent success rate. Slender Wonder is not a weight loss programme based on kilojoules, but, rather a formula based on a low GI eating plan and combined with our Slender Wonder products (shake and supplements) and a series of injections, helps to improve the body's Leptin sensitivity. Depending on the patient's starting weight, up to 4 - 7 kg's can be lost in the first month. Once the maintenance phase is reached, the patient's Leptin sensitivity will have been restored which helps you to maintain your new weight provided you continue your healthy lifestyle!

Before and after:
