

Moms are turning to
VelaShape[®]
 treatment to become
BABEs
 (Body After Baby Enthusiasts!)

Pregnancy is a beautiful and joy-filled experience, but during the nine months of pregnancy your body undergoes dramatic changes and bouncing back to your pre-baby body can be tough. If you're a mom struggling to restore your body after baby, you're not alone! In a survey of 500 moms, nearly every mom agreed that their pregnancy had changed their body. Of that, 85 percent of moms identified their stomach and 47 percent identified their thighs as problem areas that they just can't get back into shape after pregnancy.

Join the millions of women who have experienced VelaShape treatments to become VelaBABEs.

What is a **VelaBABE**? BODY AFTER BABY ENTHUSIAST

Are you a mom who exercises and eats right but finds certain areas on your body are resistant to diet and exercise?

Are you a mom on the go who finds visiting a gym everyday next to impossible?

If so, say Yes to the special VelaBABE promotion!

Contact your local VelaShape treatment provider and learn how you, too, can join the millions of moms who restored their body and reclaimed their confidence.

VelaBABE
BODY AFTER BABY ENTHUSIAST
Community!

Introduced in 2007, moms around the world have turned to VelaShape® treatment – through the first and only device approved to achieve cellulite and body contouring – to tighten and smooth trouble spots that even diet and exercise can't fix. With over 3.5 million VelaShape treatments performed, VelaShape treatment remains the leading choice by physicians as an effective treatment for cellulite reduction and non-invasive body contouring.

What causes cellulite?

A: Unfortunately, there is no definite explanation of why cellulite occurs. Often times, cellulite is associated with an unhealthy lifestyle. This may be true for some, but there are other reasons why cellulite occurs. It could be genetics or it can be due to hormonal changes, like what happens during pregnancy. One fact remains true: an estimated 80% of women have cellulite no matter what size, shape or weight they are.

What is VelaShape® treatment?

A: The VelaShape™ system is proven to effectively reduce cellulite and circumference of problem areas.

Who is the ideal candidate for VelaShape treatment?

A: An ideal candidate for VelaShape treatment is someone who eats right and exercises routinely with a Body Mass Index (BMI) of less than 30. VelaShape treatment is not a weight loss solution nor is it an alternative to surgical procedures like liposuction. During your VelaShape treatment consultation, your physician can advise if VelaShape treatment is right for you.

What areas can I treat?

A: All areas of the body can be treated where you feel you need tightening or smoothing. Most common areas for moms post-pregnancy are the lower abdomen, also known as the post-pregnancy pooch, saddlebags and buttocks.

Does the treatment hurt?

A: Most patients find the treatment comfortable – like a warm deep tissue massage.

What sort of results can I expect?

A: Results based on studies focused on post-pregnancy moms showed an average circumference reduction of 7 cm on the abdomen, 5.5 cm on the buttocks and 1 inch on each thigh.

Is it safe?

A: VelaShape treatment is safe and effective for all skin types and colors. There are no reported short- or long-term health side effects.
