

ACP / PRP (Platelet Rich Plasma)

Use the Body's own substances for a naturally beautiful look

FAST, WELL TOLERABLE, 100% BODY'S OWN SUBSTANCES*

1. Your physician draws 15ml of blood (approx. one table spoon) from you to isolate the platelets (thrombocytes). A special system is used to perform this procedure.
2. The treatment is then injected in the spesific area (e.g. your face, your hairline) to stimulate the body's own regeneration processes.
3. The platelets contain growth factors that promote the production of cell-preserving substances, including collagen and hyaluronic acid. The way platelets close wounds and encourage healing also stimulates regeneration and cellular metabolism.

Treatments usually lasts less than 30 minutes. Given very fine needles are used, hardly any bleeding occurs. As the solution uses your body's own substances, the procedure is comparably safe and well tolerated.

YOUR BENEFITS

- Body's own substances, therefore comparably safe and well tolerated
- "Naturally" beautiful appearance
- Gradual effect
- Quick and easy (30min)
- Possibility to combine various, treatments (e.g. laser with platelet-rich plasma)

APPLICATIONS OF PLATELET-RICH PLASMA (PRP)

- A Mature skin or aging skin
- B Alopecia (hereditary and non-hereditary)
- C Scars
- D (Chronic) wounds
